SUMMARY

Product designer with 4+ years turning complex, high-stakes AI and automation flows into interfaces people understand on the first try. At WideBot I design and ship conversational-AI and chatbot platforms used by businesses across MENA, working research-first and partnering closely with engineering to deliver accessible, bilingual (EN/AR) products.

EXPERIENCE

Product Designer · WideBot

Aug 2024 – Present · Maadi, Cairo, Egypt

- Designed and shipped a Shopify connector that sends shoppers automatic, real-time WhatsApp order updates in English or Arabic with zero merchant setup; owned research, user flows, and UI as solo designer, defaulting automation on to remove the setup friction blocking adoption.
- Rebuilt WhatsApp channel setup and management end to end and shipped both live: a guided connect, test, and go-live flow that replaced a wall of requirements, and a crowded settings page restructured into a four-tab channel that leads with account health and guards destructive actions.
- Designed a guided AI-avatar setup flow with real-time image validation and a live preview, so non-technical users could confirm the avatar rendered correctly before going live.
- Designed SLA, support, and call-logs analytics dashboards that give support managers a real-time, glanceable view of compliance, response times, and trends, with filtering and CSV export to replace manual reporting.
- Built and maintained a scalable Figma design system with reusable components and variants, cutting design-to-development clarifications by ~30% and accelerating feature delivery.
- Partner with PMs and engineers from discovery to handoff, running heuristic audits and defining the success metrics each design is measured against.

Freelance Product Designer

Nov 2021 – Aug 2024 · Remote, Cairo, Egypt

- Designed UI/UX for early web and mobile projects, taking work from wireframes and prototypes to developer-ready Figma handoff.
- Collaborated directly with small teams to ship usable, practical interfaces, building a strong foundation across the full design process.

SKILLS

Design Figma, Design Systems, Components & Variants, Prototyping, Interaction Design, Visual Design

UX Process User Research, User Flows, Information Architecture, Wireframing, Usability Testing, Heuristic Evaluation, Accessibility

Domain AI & Conversational UI, SaaS, Web & Mobile Interfaces

Collaboration Developer Handoff, Design Specs, FigJam, Notion

Languages Arabic (Native) · English (Professional)

EDUCATION & CERTIFICATIONS

B.A. Business Administration & Management · Modern University for Technology & Information (MTI) · 2018 – 2021

Google UX Design Professional Certificate · UI/UX Design Diploma, Route IT Training Center · UX Design Certificate, Edraak
